

GX1 UI Screen Design Pack

R1.0 · D0.1 · Controlled Visual Design Release

39 controlled screens

117 responsive screen renders

Desktop · Tablet · Mobile

GX1 + Mantine architecture

AppShell · nested NavLink · Drawer

40–60% task-region density

Release Contents

- Responsive design board for every screen
- Individual desktop, tablet and mobile PNGs
- Static screen viewer and source visual prototypes
- Screen-to-component mapping and specification JSON

Screen Register - 1 of 2

Controlled GINFINA R1.0 screen set

AI Evidence Ledger

GIN-UI-038 · CONDITIONAL AI

AI Evidence and Human Disposition Ledger

When AI assistance is enabled, expose each AI observation with source evidence, model/prompt version, confidence/uncertainty, human decision and immutable disposition.

AI context

Engineering object

UNI-BOR-ELE-001

Evidence sources

Design basis DBR-01 SLD R2 Deye inverter datasheet Review comments

AI is advisory. It cannot approve, close comments, issue IFC or certify completion.

AI evidence and disposition workspace

AI active

Check whether the proposed inverter and battery configuration is internally consistent with the approved design basis.

I found one item requiring human verification: the maximum battery charge/discharge current in the design basis should be reconciled with the selected inverter operating limit. Source evidence is attached below.

Evidence cited

Document	Title	Revision	Status
GL-UNICEF-BOR-SLD-001	Single Line Diagram	R2	IFR
GL-UNICEF-BOR-LAY-001	PV Layout	R1	IFA
GL-UNICEF-BOR-CAB-001	Cable Schedule	R1	Current

Human disposition

Decision

Requires engineering review

Disposition note

Route to electrical reviewer. No engineering release impact until verified.
